

An automobile insurance enterprise: Use CACTER Email Security Gateway System as a Preferred Choice for Seamless Connection to O365

Customer Background

An IT internet enterprise is a nationally recognized high-tech enterprise and a major big data enterprise in China. Since its establishment, it has maintained independent R&D and be customer-centered. Dedicated to automobile insurance technologies and with powerful R&D strengths, it is committed to offering the industry overall solutions to digital and intelligent automobile insurance management.

Product used: CACTER Email Security Gateway System

Customer Requirements and Pain Points

Standing out in the field of automobile insurance technologies, this enterprise attaches great importance to email security as suggested by its regular employee training about security knowledge.

It is understood that O365 used by this enterprise at present doesn't have the functions for checking URL or protecting against malicious files, and this system isn't sufficient for responding to different malicious emails. This system cannot satisfy the enterprise's requirements for protecting email security. It is necessary for this enterprise to select an email gateway with high cost-performance ratio and powerful anti-phishing capacity, which can be swiftly connected for use.

“It is insufficient to protect email security by merely relying upon O365. Otherwise, many phishing emails will still be seen in the local domain. Previously, the Group was attacked by phishing emails, so we have put the purchase of an email gateway on the agenda to strengthen protection of email security and take precautions.”——Enterprise Administrator

Solutions

This internet enterprise investigated the mainstream email gateways available from the market. In view of its trust in Coremail and outstanding performances of CACTER email security gateway system, it finally chose Coremail's CACTER email security gateway system as its wall for email security protection.

Its administrator said,

"Previously, we conducted surveys, and found that Coremail's brand awareness was high in the industry, so we gave priority to connect the gateway for trial use over a period of time. We discovered that the cloud gateway performed very well in its anti-spam and anti-phishing capacity. It almost put all malicious emails of the local

domain in the quarantine or directly intercepted them. From them, feedback and complaints have been rarely received from colleagues."

CACTER email security gateway system has been favored by this enterprise because of the following reasons:

01 The gateway has powerful anti-spam, anti-phishing and anti-virus strengths

In reliance upon the Coremail Anti-spam Center, CACTER email security gateway system can rapidly identify spams by **machine learning algorithms and models+expert review rules**. With incomparable big data based technical strengths in email anti-spam——**it can effectively identify 99.8% spams**.

1.MULTI-LAYERED ANTI-SPAM

Integrates several world-leading anti-spam technologies and collaborates with well-known anti-spam engines, performing multi-dimensional analysis to ensure that phishing, virus, and spam emails are isolated by the gateway.

02 The gateway is compatible with mainstream email systems and easy to install in the systems

Although this internet enterprise used O365, no problem was encountered in connecting the gateway to the email system. Instead, the gateway connection was smooth. The administrator greatly recognized that it took a short time to connect the cloud gateway without being sensed by the users. He replied,

"It was quite smooth to connect the gateway. No problem was met in the connection process."

Only steps have to be completed for deploying the CACTER email security gateway system!

The main steps include easing restrictions upon connecting the cloud gateway to firewalls and email systems. Then, keep records on modification of the domain name (DNS MX). The operations are simple, and it would only take 5 minutes to connect the gateway if fast. Besides, the CACTER email security gateway system is deployed in the cloud without occupying hardware resources of the email system, and provides independent protection for email systems.

It is compatible with other systems such as Coremail, Exchange, Gmail, IBM, Domino and lotus notes apart from O365, to provide anti-spam, anti-phishing and anti-virus services.

Customer Evaluation

Speaking of the overall score for CACTER email security gateway system, the administrator of this enterprise **gave 9 points (1-10 points) without hesitation.** He said,

"The anti-spam results of the cloud gateway satisfy our requirements and expectations. The service team is also highly responsive. They can be always available to answer all of our questions."

As a pioneer in the field of email security, Coremail takes services as its important development orientations while developing products and improving its technologies and quality. Superior security products guarantee customers' email security in their local domains, and its considerate services make Coremail's products more trustworthy. Coremail strives to help customers improve their email security, and takes firmer steps ahead.
